

1- QUICK START

2.1 - The control unit

Horizontal and Vertical model

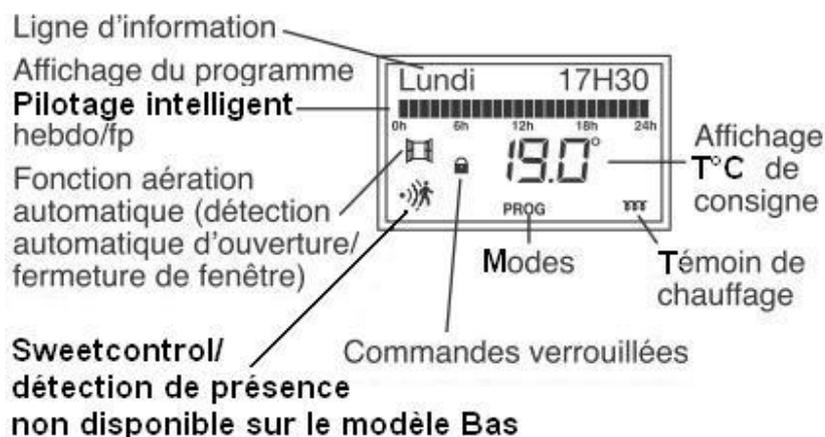

1 Screen – 2 Keys  and  - 3 Keys  and  - 4 OK/Validation /  Stop heating – 5 Settings  – 6 AUTO Automatic control function – 7 Automatic ventilation/Presence detection  (H and V model only) – 8 Energy consumption indicator  – 9 Ventilation function  (Low-profile model only) – 10 Balancing function.

On/off switch on the back or side of the appliance.

2.1.1 Description of control unit screen

French	English	French	English
ligne d'information	information line	lundi	Monday
affichage du programme hebdo/fp	programme display weekly / pilot wire	pilotage intelligent	intelligent control
détection automatique d'ouverture / fermeture de fenêtre	automatic detection of window opening/closing	fonction aération automatique	automatic ventilation function
commandes verrouillées	commands locked	détection de présence non disponible sur le modèle Bas	presence detection not available on the low-profile model
Témoin de chauffage	Heating indicator	affichage T°C de consigne	setpoint temperature °C display

2.2 - Starting/stopping heating function on appliance

To start the appliance, put the on/off switch to I.

We recommend you use this switch if you plan an extended shutdown (summer, no heating period). When you start up again, you will have to enter the date and time once more. The programming data are stored.

User manual

The first time the device is turned on, the screen lights up. Intel Pilot ON, the window opens and Sweet control (presence/absence detection) is displayed. Intelligent control is active (not available on low-profile model) is displayed. To turn off the radiator's heating function, press and hold the  key until "OFF" appears. The appliance is then turned off. To turn the radiator on, press the  key. The day, time and comfort temperature at the default of 19°C are displayed.

2.2.1 – Activate the screen

<p>If the screen is not back-lit, press any key to reactivate it.</p>		<p>The screen lights up.</p>
---	---	------------------------------

2.2.2 – Select heating mode

The first time the appliance heats up, a slight smell might be detected. This is caused by removal of any traces of products left from manufacturing, and disappears after a few moments' operation.

Pictogram	Description	When to use this mode
	<p>Comfort</p>	<p>You are at home</p>
<p>ECO</p>	<p>Eco</p>	<p>You are away from home for 2 to 48 hours, or you are asleep.</p>
	<p>Frost protection</p>	<p>You are away for more than 48 hours or your heating is not in use. The Frost Protection temperature is set at about 7°C ± 3 and cannot be changed.</p>
	<p>Comfort -1</p>	<p>These heating modes are only available when the detector is being used, and/or if your installation has an energy management system.</p>
	<p>Comfort -2</p>	
	<p>Stop heating.</p>	<p>You want to turn off the radiator.</p>

2.3 - Adjusting setpoint temperature

The default temperature is 19°C.
You can alter it by pressing the or keys.

Press the key to confirm.

The heating indicator appears on screen if the ambient temperature is lower than that displayed (setpoint temperature).

Wait at least 6 hours for the temperature to stabilise.

2.4 – Set day and time

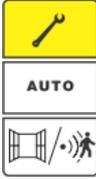

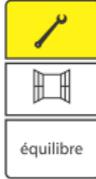

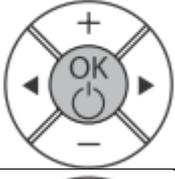

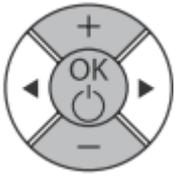

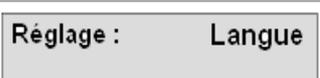

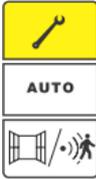

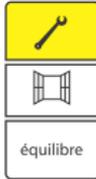

<p>Access the day of the week menu setting by pressing briefly on the key.</p>	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> H/V model model </div> <div style="text-align: center;"> Low-profile </div> </div>	<div style="border: 1px solid gray; padding: 5px; text-align: center;"> Réglage : J/H/Min </div> <p>"Adjust D/H/Min" appears in the text field.</p>
<p>Press to access the sub-menu for setting the day of the week.</p>		<div style="border: 1px solid gray; padding: 5px; text-align: center;"> Réglage Jour LU </div> <p>The first two letters of the day of the week blink.</p>
<p>Select the day of the week by pressing the and keys, and confirm by pressing .</p>		<div style="border: 1px solid gray; padding: 5px; text-align: center;"> Réglage : Heure 000 </div> <p>Once the day has been confirmed, the hours will blink.</p>
<p>Set the hour by pressing the or keys and confirm with .</p>		<div style="border: 1px solid gray; padding: 5px; text-align: center;"> Réglage : Minute 2:00 </div>

User manual

		Once the hour is confirmed, the minutes will blink.
Set the minutes by pressing the  or  keys and confirm with  .		 <p>Once the minutes are confirmed, the screen returns to the settings menu.</p>
To quit the settings menu, press  briefly.	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  AUTO  H/V model </div> <div style="text-align: center;">   Low-profile model équilibre </div> </div>	 <p>Return to stand-by screen.</p>

User manual

2.5 – Set language

<p>To access the language setting menu, press briefly on .</p>	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>H/V model profile model</p> </div> <div style="text-align: center;">  <p>Low- profile model</p> </div> </div>	 <p>"Adjust D/H/Min" appears in the text field.</p>
<p>Browse the menu with the left  or  scroll key, to the "set language" sub-menu</p>		 <p>The "set language" sub-menu appears.</p>
<p>Press  to enter the "set language" sub-menu.</p>		 <p>The language blinks.</p>
<p>Select the required language pressing  and  and confirm with .</p>		 <p>The language is confirmed back to main menu.</p>
<p>To quit the settings menu, press .</p>	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>H/V model profile model</p> </div> <div style="text-align: center;">  <p>Low- profile model</p> </div> </div>	 <p>Return to stand-by screen.</p>

2.6 - Practical functions

2.6.1 – Locking/unlocking controls

<p>You can avoid inadvertent key presses by locking the controls. Do this by pressing and holding the AUTO and  keys (H and V models) or  and  keys (Low-profile model).</p>		<p>"Locked" and a padlock are shown on screen.</p>
---	---	--

Do the same to unlock it.

2.6.2 - Limit setpoint temperature

You can limit the maximum Comfort setpoint temperature of 28°C.

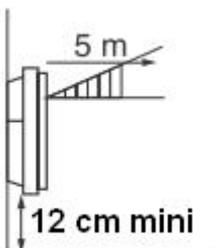

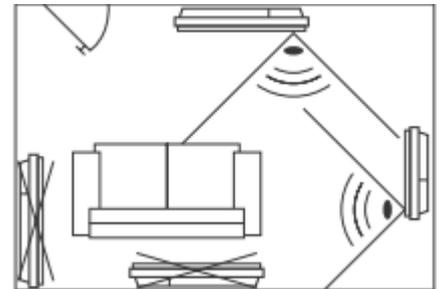

<p>To limit the maximum comfort temperature, press  and  until "Max Temp setting appears</p>		 <p>The max Comfort temperature appears.</p>
<p>To change the temperature displayed, press the  key until the desired temperature appears, then confirm with .</p>		

Note: It is impossible to increase the comfort temperature above the maximum comfort temperature saved. The "  " pictogram and the max comfort setpoint temperature are displayed.

2.6.3– Occupation detection and automatic ventilation detection functions (not available on low-profile model)

Occupation detection (presence detection) allow you to heat your room only when there is someone there. The radiator will then work in Comfort mode.

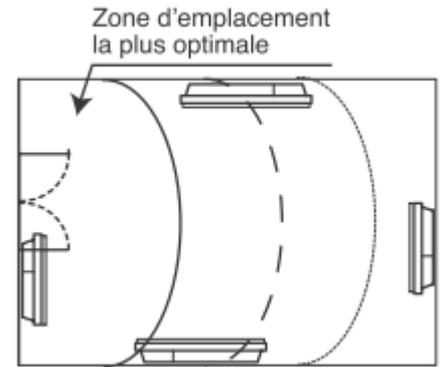

The occupation detection function of your radiator can be optimized by installing it in the best possible way (e.g. not behind a sofa, a busy traffic area such as a corridor, near furniture, etc.).

Detection does not work below the sensor.

The automatic ventilation function allows the radiator to detect a sudden drop in temperature if a window is opened, and to switch to Frost-protection mode while the room is being ventilated. It will return to the setpoint temperature when it detects the window has closed. Your appliance responds to the window opening and closing according to a number of variables, including in particular:

- the preferred room temperature,
- the outside temperature,
- the configuration of your installation, etc.

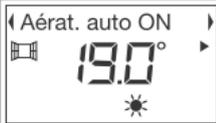

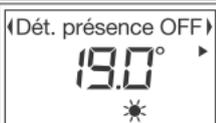

zone d'emplacement la plus optimale = optimal position zone

These functions can be used in Intelligent control mode, as well as in Comfort, Eco and Programming modes.

How to activate/deactivate these functions

Pressing on   in sequence allows you to activate and deactivate the occupation detection and ventilation detection functions.

1st press: activate the function Automatic ventilation detection.	
2nd press: activate the function Occupation detection	
3rd press: deactivate the Automatic ventilation detection function.	
4th press: deactivate the Occupation detection function.	

2.6.4 - Balance function

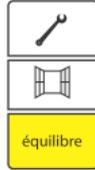

Use the Balance function to adjust your appliance to the optimal temperature, the correct balance between comfort and economy.

To go to the recommended settings at once, use the Balance function.

To use the Balance function, - press the  and  keys simultaneously for the H and V models.		 The temperature displayed is 19°C in Comfort  mode and 15.5°C in ECO mode.
--	---	---

User manual

- press the  for the Low-profile model.

"Eco-conscious" appears for a few moments on screen.

2.6.5 - Energy consumption indicator

The energy consumption of an electrical heating appliance depends among other things on the temperature setting.

The government recommended temperature is 19°C. The energy consumption indicator lets you check where you are with respect to this recommended T°.

So, depending on the temperature required:

- If the black arrow on the screen points to the red or deep orange pictogram, you know you will be more Eco-conscious by reducing your T° setting significantly.

- If the black arrow on the screen points to the yellow pictogram, you will be more Eco-conscious by reducing your T° setting slightly.

- If the black arrow is at the green arrow, you are at the recommended T° and you are already Eco-conscious.

2.6.6 - Return to factory settings

Your appliance allows you to return to factory settings (recommended temperature, initial programme). Pressing any key lights up the screen.

Horizontal and Vertical models

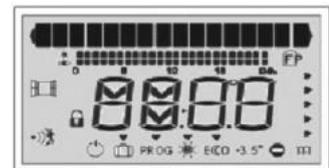

Press and hold simultaneously for a few seconds

the  + **AUTO** +  keys until all displays are shown on screen.

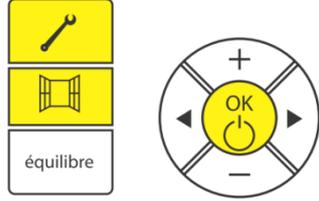

The energy saving and programming functions are deactivated.

After a few moments, all the pictograms on the screen appear.

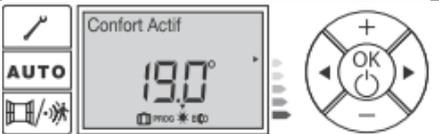

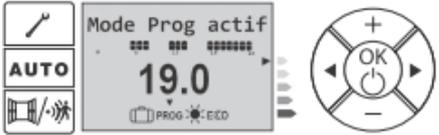

Low-profile model

<p>Press and hold simultaneously for a few seconds</p> <p>the  +  +  keys until all displays are shown on screen.</p> <p>The energy saving and programming functions are deactivated.</p>		<p>After a few moments, all the pictograms on the screen appear.</p> 
--	---	--

USE

4.1 - Choice of heating mode

To switch between modes, press  then confirm with .

NAME OF MODE	DESCRIPTION	SCREEN
<p>COMFORT</p> 	<p>You are at home. By default Comfort mode temperature is 19°C.</p> <p>You can vary it between 12.5°C and 28°C (in 0.5°C steps), by pressing  or .</p> <p>Confirm by pressing .</p>	
<p>ECO</p>	<p>You are away (between 2 and 48 hours) or you are asleep.</p> <p>The recommended Eco temperature is -3.5°C below the Comfort temperature. You can alter it by pressing the  or  keys.</p> <p>Confirm by pressing .</p>	
<p>FROST PROTECTION</p> 	<p>You are away for more than 48 hours. The Frost Protection temperature is set at 7°C ±3.</p> <p>It cannot be altered.</p>	
<p>PROG</p>	<p>Programming mode: the radiator will follow the programme entered manually for each day of the week, or else the pilot</p>	

User manual

wire commands, if the appliance is connected to a programming controller.

The programme defined for the current day is displayed above the setpoint temperature.

4.2 – Comfort mode

This mode gives you the desired ambient temperature in the room. When activated, only the  pictogram appears under the setpoint temperature on screen.

The Eco indicators allow you to optimize your settings (cf. section 2.6.5). The recommended Comfort temperature is 19°C.

The heating indicator  appears on screen if the ambient temperature is lower than that displayed.

If you reduce the Comfort temperature below the Eco temperature, the latter drops by -0.5°C with respect to the Comfort temperature. On the other hand, if you increase the Comfort temperature, the Eco temperature does not change.

4.3 – ECO mode

This is a lower temperature with respect to the Comfort temperature. When this mode is activated, only the ECO pictogram appears under the setpoint temperature on screen.

The Eco temperature can be adjusted directly by pressing the  and  keys. The maximum Eco mode temperature is 19°C.

4.4 – Frost protection mode

When this mode is activated, only the  pictogram appears under the setpoint temperature.

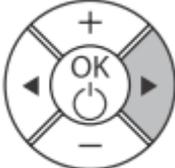

4.5 – PROG mode

4.5.1 - Weekly programming

The Weekly PROG will follow the programming saved in this menu.

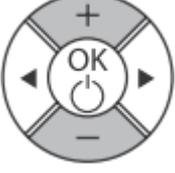

<p>Press the Key </p>	  H/V model Low-profile model	 Setting: D/H/Min appears on screen.
<p>Press the key  once.</p>		 Prog Setting appears. Confirm with  .
<p>Press the  or  key.</p>		 PROG: Weekly is displayed on screen. Confirm with  .

User manual

<p>To display programmes for each of the week, press .</p>		
<p>To change the programming for one day of the week, press .</p> <p>The  and  keys are used to select COMFORT mode (symbol "") or ECO mode (symbol "").</p> <p>The  and  key allow you to step through the hours.</p> <p>Confirm with  to go to the next day.</p> <p>After Sunday, the "Back to menu" screen appears, press  to go back to "Setting: Prog"</p>		
<p>To activate Prog mode, press several times on the left  or right  scroll keys until the selection arrow reaches Prog mode.</p>		 <p>The mode selection arrow  flashes over the currently selected mode.</p>

4.5.2 – PILOT WIRE programming

By default, the external programme is used on every day of the week, which responds to "pilot wire" commands sent by the external control unit. So if your appliance is connected to a central control unit, you need do nothing except for going into Prog mode.

<p>Press the key </p>	  <p>H/V model Low-profile model</p>	 <p>Setting: D/H/Min appears on screen.</p>
<p>Press the key  once.</p>		 <p>Prog Setting appears.</p> <p>Confirm with .</p>
<p>Press the  or  key.</p>		 <p>PROG: Pilot wire appears on screen. Confirm with .</p>

User manual

To quit the menu, press on the key 	 AUTO  équilibre	
To activate Prog mode, press several times on the left  or right  scroll keys until the selection arrow reaches Prog mode.		 The mode selection arrow ▼ flashes over the currently selected mode.

5 - LOAD-SHEDDING

A load-shedding system, cutting the power, is incompatible with our appliances as it damages the thermostat. During load-shedding periods, your appliance displays "Load-shedding". It then returns to its initial operating mode.

6 - CALIBRATION

It is possible, depending on your installation, that you may detect an ambient temperature other than that displayed on your radiator. In this case, you can calibrate the radiator to bring the two displays into line.

First of all, allow the temperature to stabilise at the desired comfort temperature for at least 6 hours.

You can then calibrate your radiator by a long (3 sec) press on  and  until "OFFSET" appears. Adjust the temperature difference observed by pressing the  or  keys then confirm with the  keys.

Example: the temperature displayed on your radiator is 20°C. That displayed on your thermometer is 19°C =>, select the calibration value of -1°C.

7 - MAINTENANCE

Before any maintenance action, turn off your appliance by a long press on the  key. To maintain the performance of your radiator, dust should be removed with a vacuum cleaner or a brush from the lower and upper grills of the appliance, at least twice a year. The appliance can be cleaned with a damp cloth; never use abrasive products or solvents. In a polluted environment, dirt may appear on the grill of the appliance. This phenomenon is linked to poor ambient air quality. In this case it is recommended that the room should be properly ventilated (ventilation, air intake, etc.). This soiling does not justify replacement of the appliance under the warranty.

8 - SUPPORT

What to do if....	Action
The radiator does not heat.	If you are in programming mode, check that programming is in COMFORT mode. Check that the installation's circuit-breakers are engaged or that the load-shedder (if there is one) has not shut the heating down. Check the room air temperature: if it is higher than the setpoint temperature, the heating pictogram does not light up: the radiator does not heat.
The radiator heats all the time.	Check the radiator is no in a draught or that the setpoint temperature has not been modified.
The radiator does not heat enough.	Increase the Comfort setpoint temperature. If the setting is at maximum, carry out the following checks: <ul style="list-style-type: none"> - Is there another heat source in the room. - Is your radiator only heating the room (door open). - Check the appliance's power supply voltage. - Check that the power of your radiator matches the size of your room (we recommend an average of 100W/m² for a ceiling height of 2.5m).
Soiling appears on the wall around the radiator.	This is linked to poor ambient air quality. In this case it is recommended that the room should be properly ventilated (ventilation, air intake, etc.). and that the air quality is checked, and avoid smoking indoors. This soiling does not justify replacement of the appliance under the warranty.
The heating pictogram appears on the screen when the radiator is in ECO mode.	This operation is normal. The radiator may heat to maintain the Eco temperature.
For appliances with a programming system, or controlled from the pilot wire.	
The radiator does not follow external programming commands.	Check that the control unit is being used correctly (see user manual). Check your appliance is in Programme mode, and that the "Central" external programme is set to the desired day of the week.
The surface of the radiator is very hot.	It is normal for the radiator to be hot when it is operating, with the maximum surface temperature being limited to comply with the NF standard for Electricity Performance. If you think that your radiator is still too hot, check the power is suitable for the size of your room (we recommend 100W/m ² for a ceiling height of 2.5m). and that the radiator is not in a draught, that would affect its control.
The control unit screen does not light up.	Check the switch on the back or side of the appliance is in the I position.
